

Criando o banco de dados

banco: bdPw3

```
create table tbContato(  
    idContato int PRIMARY key AUTO_INCREMENT,  
    nome varchar(40),  
    email varchar(40),  
    assunto varchar(40),  
    mensagem varchar(5000)  
);  
  
insert into tbContato values(null,'Thiago','thiago@gmail.com','Greve','greve mas tem aula');  
insert into tbContato values(null,'Maria','maria@gmail.com','Greve2','greve mas tem  
aula2');  
insert into tbContato values(null,'Ana','ana@gmail.com','Greve3','greve mas tem aula3');
```

Sistema Insert No Laravel

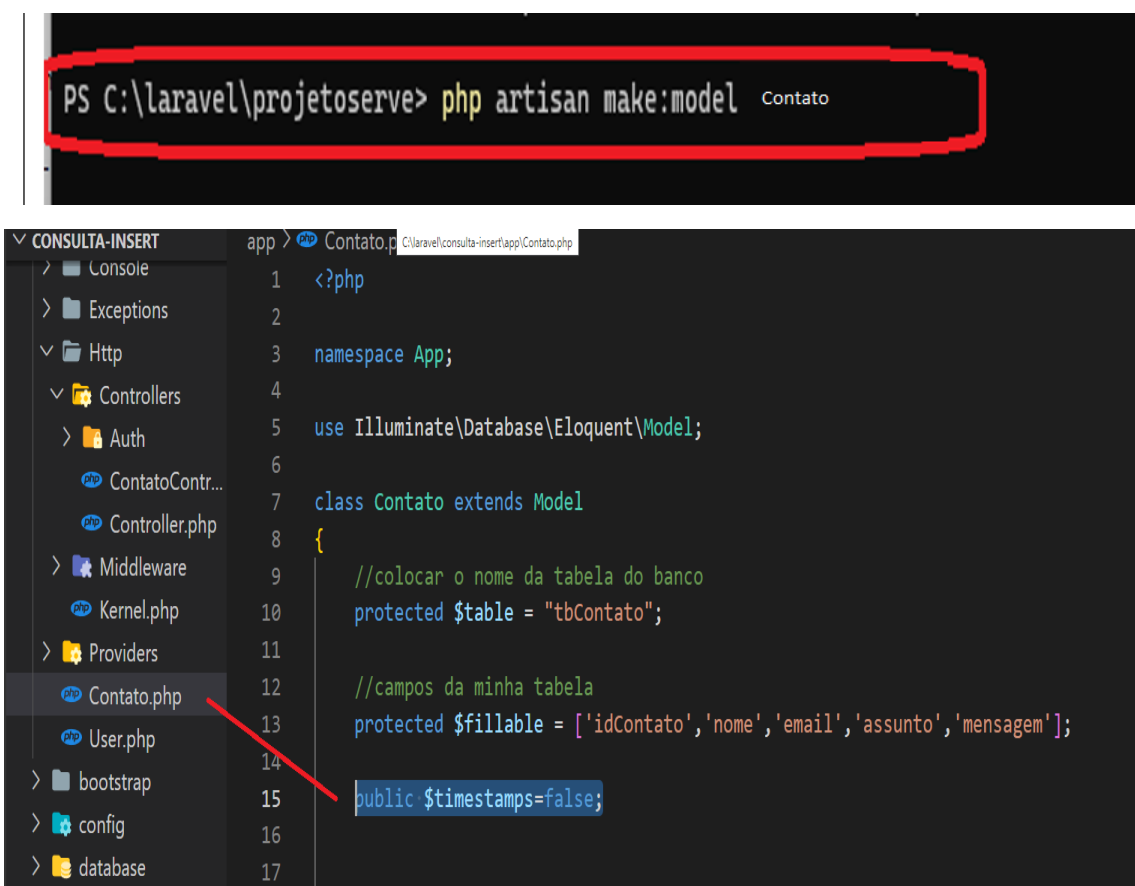

```
1 | web.php  
2 |  
3 | -----  
4 |  
5 | Here is where you can register web routes for your application. These  
6 | routes are loaded by the RouteServiceProvider within a group which  
7 | contains the "web" middleware group. Now create something great!  
8 |  
9 |  
10 |  
11 |  
12 | */  
13 |  
14 | Route::get('/', function () {  
15 |     return view('welcome');  
16 | });  
17 |  
18 | Route::get('/contato', 'ContatoController@index');  
19 | Route::post('/contato', 'ContatoController@store');  
20 | Route::get('/contato/excluir/{idContato}', 'ContatoController@destroy');
```

Web.php

```
Route::get('/contato', 'ContatoController@index');  
Route::post('/contato', 'ContatoController@store');  
Route::get('/contato/excluir/{idContato}', 'ContatoController@destroy');
```

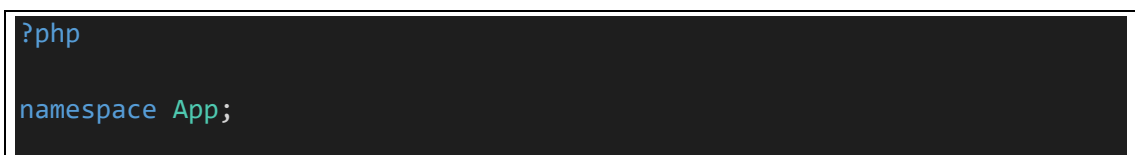

Contato.php classe model

The image shows two screenshots. The top screenshot is a terminal window with a black background. It displays the command `PS C:\laravel\projetoserve> php artisan make:model Contato` in a light green font. A red hand-drawn rectangle highlights the entire command line. The bottom screenshot is an IDE window showing a file explorer on the left and a code editor on the right. The file explorer shows a project structure with folders like 'Console', 'Exceptions', 'Http', 'Controllers', 'Auth', 'Middleware', 'Providers', 'bootstrap', 'config', and 'database'. Under 'Providers', 'Contato.php' is selected. The code editor shows the content of 'Contato.php' with line numbers 1 through 17. The code is as follows:

```
1 <?php
2
3 namespace App;
4
5 use Illuminate\Database\Eloquent\Model;
6
7 class Contato extends Model
8 {
9     //colocar o nome da tabela do banco
10    protected $table = "tbContato";
11
12    //campos da minha tabela
13    protected $fillable = ['idContato','nome','email','assunto','mensagem'];
14
15    public $timestamps=false;
16
17 }
```

Copia e cola no model a parte abaixo

The image shows a code editor with a black background. It contains the following code:

```
?php

namespace App;
```

```
use Illuminate\Database\Eloquent\Model;

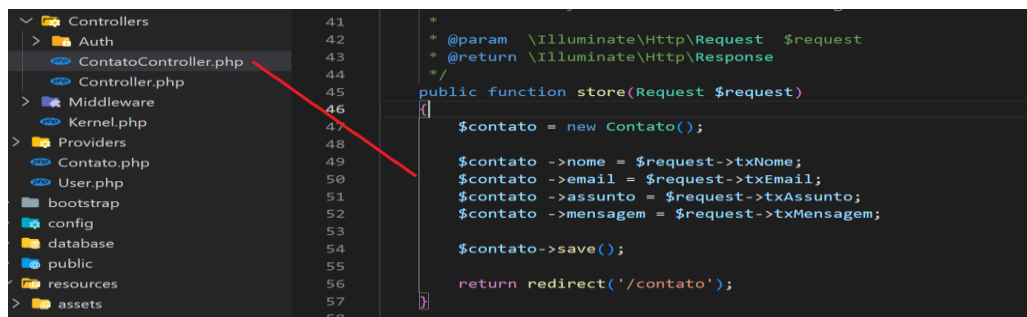

class Contato extends Model
{
    //colocar o nome da tabela do banco
    protected $table = "tbContato";

    //campos da minha tabela
    protected $fillable =
['idContato','nome','email','assunto','mensagem'];

    public $timestamps=false;
}
```

Controller lá no Controller função store para adicionar os dados

php artisan make:controller ContatoController --resource

Copie e cole!

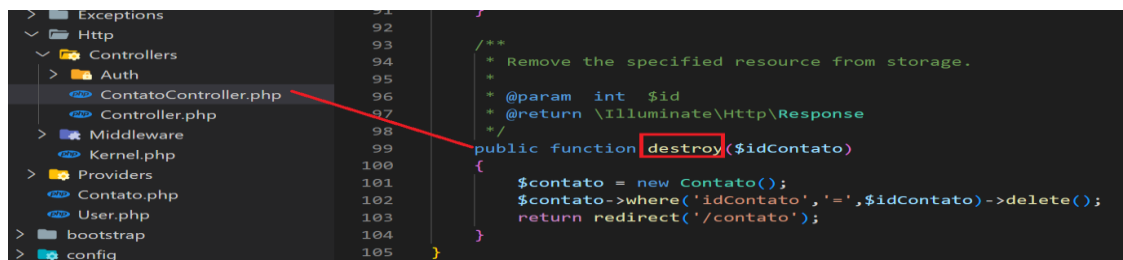

```
public function store(Request $request)
{
    $contato = new Contato();

    $contato ->nome = $request->txNome;
    $contato ->email = $request->txEmail;
    $contato ->assunto = $request->txAssunto;
    $contato ->mensagem = $request->txMensagem;

    $contato->save();

    return redirect('/contato');
}
```

Parte do delete para deletar os dados

```
public function destroy($idContato)
{
    $contato = new Contato();
    $contato->where('idContato', '=', $idContato)->delete();
    return redirect('/contato');
}
```

Parte do formulário crie a classe conforme figura abaixo

Copie e cole!

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-
scale=1.0">
    <title>Document</title>
</head>
<body>

    <form action="/contato" method="post">
        {{csrf_field()}}
        <input type="text" name="txNome" placeholder="Nome" />
        <input type="text" name="txEmail" placeholder="E-mail" />
        <input type="text" name="txAssunto" placeholder="Assunto" />
        <input type="text" name="txMensagem" placeholder="Mensagem" />
        <input type="submit" value="Salvar" />
    </form>
```

```
@foreach($contatos as $c)
    <p>
        {{ $c->idContato }}
        {{ $c->nome }}
        {{ $c->email }}
        {{ $c->assunto }}
        {{ $c->mensagem }}
        <a href="/contato/excluir/{{ $c->idContato }}">
            Excluir
        </a>
    </p>
@endforeach

</body>
</html>
```
